PROFILE

Computer Engineering student at FIUBA (University of Buenos Aires), focused on software development. I have worked on projects with Python, JavaScript and Java, and on data analysis and machine learning at the Ford Innovation Challenge III. I am looking for my first trainee or junior position to contribute to a development team and keep growing as a developer.

PROJECTS

Ford Innovation Challenge III: AI Edition — Ford Argentina

Sep. – Oct. 2026 · Data-Driven Predictive Quality Challenge (Pacheco Plant) · Team of 3

- Together with my team, we developed a solution to anticipate which vehicles need calibration in an Additional Inspection, based on ~195,000 records from the plant's quality traceability system (QLS). The proposal detects 1.44 times more calibrations than the current random sampling, with the same inspection capacity. We presented the problem and the data analysis to the jury.

EDUCATION

Computer Engineering

2022 – present · Faculty of Engineering, University of Buenos Aires · 60% of the degree completed

Mechanical Engineering (not completed)

2020 – 2021 · Faculty of Engineering, University of Buenos Aires

High School Diploma in Exact Sciences, Natural Sciences and Engineering

2014 – 2019 · Colegio Nacional de Buenos Aires

COURSES

Full Stack Web Development

2023 – 2024 · Digital House

TECHNICAL SKILLS

Languages Python, Java, JavaScript, C++, SQL

Web development Node.js, Express.js, Flask, HTML, CSS

Tools and practices Git, GitHub, TDD, object-oriented programming, Scrum

LANGUAGES

Spanish: native · **English:** conversational
